

DEFINITION OF SHADING

“Shading” (V-Shade) refers to visible, different shifts in tone in the appearance of a single ceramic tile, or tiles of the same colour.

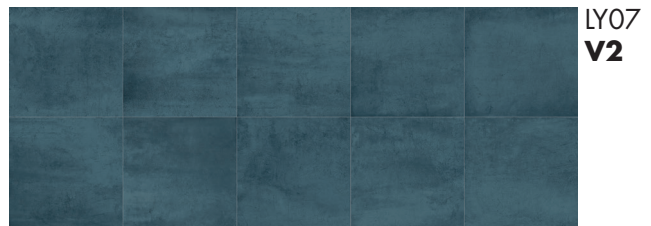

A number of classes have been identified, into which the various Mirage collections of porcelain stoneware tiles are classified:

V1= uniform **V2**= slight shading **V3**= moderate shading **V4**= strong shading

Also in the Mirage catalogue, some collections feature medium-strong shading (V3 and V4), in order to represent the actual veining pattern of a number of natural references in the catalogue, while other collections feature almost uniform colour (V1 and V2).

Examples of **slight**, **moderate** and **strong shading** for a number of Mirage collections:

LEMMY

SILVERLAKE

JURUPA

NOON

ARDESIE
